Success grows here.

June 1, 2018 | Issue: 3

Plot Planting Progress Map

- Corn Plot
- Xtend Soybean Plot
- Liberty Link Soybean Plot

Xtend plots and 12 Liberty Link plots, as some growers are trying to race to beat mother nature, and just get all of their crops in the ground. Of the soybean plots that are in the ground, they are off to a great start!

Interns are out every 10-14 days scouting these variety plots. Looking for visible differences amongst all of the different varieties is just one of the many things interns look for when scouting. They also look for nutrient deficiencies, spacing issues and disease/insect/weed pressure; anything that could be a yield contributing factor.

If you would like more information on a plot or trial, please contact your Sunrise Agronomy Solutions Advisor.

Dial in on the Trial:

As described in our first issue, Sunrise is engaging in some product trials from our PCT | Sunrise lineup. This week we are dialing in on the **StandUp™ Fertilizer™** trial. Fertilizer is a first-of-its-kind chelate that can be added directly to starter fertilizer on both corn and soybeans. Fertilizer makes the nutrients in your starter, as well as the nutrients in your soil, more available.

The picture to the right shows a treated-untreated line of Fertilizer. The untreated area (left side of picture) received **StandUp™ Premium P Corn Starter**. The plants treated with Fertilizer (right) are measuring 2-3 inches larger in height and are also about a growth stage ahead of the plants just treated with **StandUp™ Premium P Corn Starter**.

For more information on Fertilizer and the rest of the PCT | Sunrise lineup, please visit our website: www.pctnutrients.com

Variety Plots Update:

Today is the first of June and we finished up with corn plots this week! We exceeded our goal as a company of 40 corns plots, as we have a total of 42 in the ground and growing. With the wet spring we've had in our Ballville and Norwalk territories, that's put a delay on getting the rest of our soybean plots in. With more rain in the forecast, it's still uncertain if we will accomplish our goal of 20

Plot Progress:

42

Corn Plots Planted

Goal: 40 Plots

11

Xtend Soybean
Plots Planted

Goal: 20 Plots

6

Liberty Link Soybean
Plots Planted

Goal: 12 Plots
